EDUCATION

Carnegie Mellon University — **May 2025**
Master of Science in Electrical and Computer Engineering — *Pittsburgh, PA*
- Courses: Principles of Software Construction, Machine Learning, Deep Learning and Pattern Recognition, Building Reliable Distributed Systems, Foundations of Computer Systems, Data Structure

University of British Columbia — **Sept. 2023 – Dec. 2023**
Master of Engineering in Electrical and Computer Engineering — *Vancouver, Canada*
- Courses: Machine Learning Models, Relational Databases

National Taiwan University of Science and Technology — **2022**
Bachelor of Science in Electrical Engineering — *Taipei, Taiwan*
- Courses: Communication Systems, Data Networks, Digital System Design, Big Data and Programming, Signals and Systems, Applied Renewable Energy with MATLAB, Microcomputer

WORK EXPERIENCE

Apple — **May 2024 - Aug. 2024**
Software Engineering Intern — *Montreal, Canada*
- Committed tools to boost operational efficiency for the Tap-to-Pay team using Swift and Xcode.
- Led the development of a proof of concept demo, delivered the project 2 weeks ahead of schedule and showcased wireless technology innovations.
- Collaborated with 5 cross-functional teams to integrate new features and optimize security function.

Logitech — **Feb. 2022 - July 2022**
Electrical Engineering Intern — *Hsinchu, Taiwan*
- Engineered new firmware features for Logitech Gaming keyboards, integrated proximity sensor research to enable adaptive user interaction, resulting in a 15% improvement in responsiveness.
- Optimized power consumption of prototype keyboards by 20% by creating efficient power management algorithms in embedded software, utilizing low-power mode designs to minimize energy usage.

SKILLS

Software: Java, Python, Swift, C, C++, Objective-C, MATLAB, HTML, JavaScript, Assembly Code
Tools: Kubernetes, Docker, AWS, GCP, PyTorch, Node.js, React.js, SQL, Git, Linux, GitLab CI/CD
Competencies: Software Development, iOS Development, Machine learning, Large Language Model

PROJECTS

Conversational AI for Wireless Networks — **Sept. 2024 - May 2025**
Research Assistant - Laboratory for Emerging Wireless Technologies (CMU)
- Co-authored the paper *"Can we make FCC experts out of LLMs",* accepted for HotMobile 2025 (ACM International Workshop on Mobile Computing Systems and Applications).
- Invented WiLL, an LLM system featuring a novel hierarchical chunking strategy**,** boosting FCC regulation query accuracy to 78.57%**,** outperforming state-of-the-art models**.**
- Presenter for the paper at HotMobile 2025 in Palm Springs; view presentation recording.

WatchPoint (CMU Hackathon – 3rd Place Winner) — **Nov. 2024**
- Developed WatchPoint, a parental control app that monitors children's digital interactions for abusive or harmful content using advanced sentiment analysis and real-time alerts.
- Implemented customizable privacy settings to balance safety and respect for children's autonomy, empowering parents to create a safer online environment.
- Outperformed 50+ competing teams in CMU's Nova Hackathon, securing 3rd place.

Web Board Game: Santorini — **June 2024**
- Designed detailed domain models, object diagrams, and sequence diagrams to implement a low coupling, high cohesion, extensible, reusable, and readable game design.
- Automated deployment, continuous integration, and testing pipelines using Maven for dependency management, and Jacoco and JUnit to achieve 95% unit and integration test coverage.
